

Collecting Rolex Milgauss, Yacht-Master, Turn-O-Graph, Explorer I, Explorer II: a journey through the Rolex watches which nobody has yet “EXPLORED” in such depth

Guido Mondani Editore is glad to announce the publication of a new special limited edition dedicated to Rolex: “Collecting Rolex Milgauss, Yacht-Master, Turn-O-Graph, Explorer I, Explorer II”.

Together with “Rolex Submariner Story”, published by Guido Mondani Editore themselves, this publication represents the world’s biggest book on Rolex watches, with its format of 31 x 41 cm.

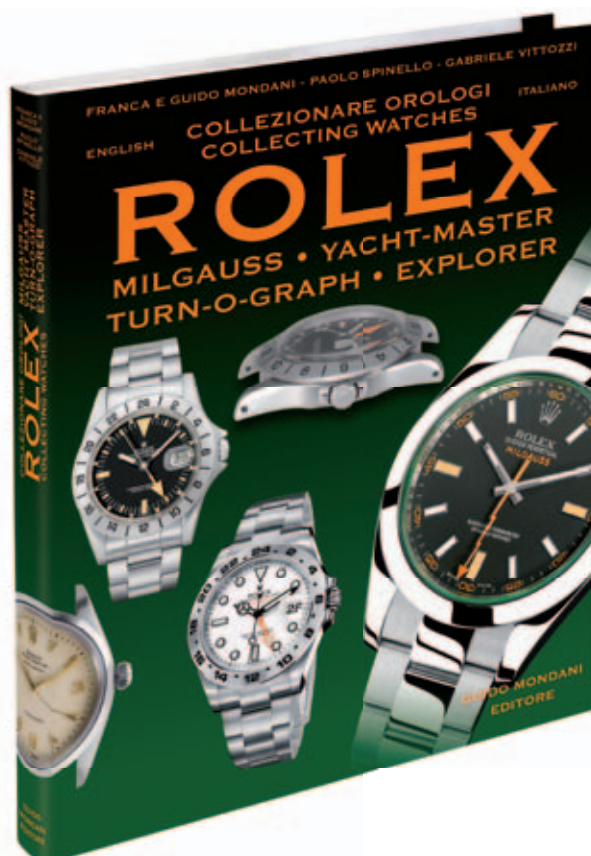

The Milgauss, Yacht-Master, Turn-O-Graph, Explorer I and Explorer II watches had never been described in such detail by anybody else, but due to the increasing importance of all these models, Guido Mondani Editore has decided, after years of research and study, to publish this luxury guide, which will be indispensable to Rolex collectors and enthusiasts all over the world.

The limited edition of 2,000 copies makes this work even more prestigious and will soon become a hard-to-find collector’s item.

All references are described in the most minute detail even examining those small features which today determine big price differences on the market, such as: the graphics and evolution of all types of dials, the hands, bezels, case back, different winding crowns, bracelets, calibers and historical aspect of all models.

“Collecting Rolex Milgauss, Yacht-Master, Turn-O-Graph, Explorer I, Explorer II” is a very beautiful journey among “the scientist’s watch”, “the skipper’s watch”, “remainder of times past”, “the reinforced Rolex” and “the speleologist’s watch”.
